

Name

SCORPION SICS combat information system

Catchline

Connects all vehicles of the GTIA joint tactical group and shares combat information

Features

- Unique onboard operational information system, from the command post (CP)-based group commander to the GTIA joint tactical group corps commander
- Digitised sharing of the tactical situation and the positions of friendly forces via PR4G then CONTACT with simultaneous voice and data connectivity
- Almost real-time transmission (less than 10 seconds) of tactical situation information
- Interoperability with command, then all support forces (artillery, air mobility) and backups

Advantages

- Innovative, agile development-based design
- Presents useful information to decision-makers and leaders
- Able to track friendly force positions
- Single, intuitive system linking GTIA corps commanders to the group commander, automating tasks and increasing operational capabilities
- Simple, intuitive and ergonomic desktop and tactile interfaces developed with ground forces
- Contribution to SCORPION collaborative combat
- Infovaluation insured by native interoperability between SICS-equipped units and interfacing information systems: SIA (command), ATLAS (artillery), SIT-ALAT (air mobility), etc.

Deployed on GRIFFON in the Sahelo-Saharan region in July 2021 and in all theatres since 2022.
